

Looking northeast at the southwestern portion of Satan Butte. The prominent spire on the left is composed of mafic tuff-and-ash deposits of the lower mudstone and argillaceous sandstone member of the Bidahochi Formation (Tb1). The butte at right is capped by mafic monchiquite and basanite flows overlying Tmt and Tb1 (mostly obscured by talus (Qtr)).

Bedrock and Surficial Geologic Map of the Satan Butte and Greasewood 7.5' Quadrangles, Navajo and Apache Counties, Northern Arizona

By
Lee Amoroso, Susan S. Priest, and Margaret Hiza-Redsteen
2013

This map was printed on an electronic plotter directly from digital files. Dimensional calibration may vary between electronic plotters and between X and Y directions on the same plotter, and paper may change size due to atmospheric conditions; therefore, scale and proportions may not be true on plots of this map.
